

## Remote Blood Draw Coordination

As part of IHD's commitment to our white glove customer service, we provide full coordination of remote blood draws both domestically and internationally, for all patient panels including FDA Donor lab work.

### How it works

01

Clinic submits requisition form along with Remote Draw Request Form

02

Our Kit Coordination team reaches out to patient and clinic to commence coordination of blood draw (if required) and kit outbound shipment

03

Kit is prepped and shipped on same day of request (submission before 3PM PST required)

04

Draw performed and kit sent back to IHD for processing

05

Results flow to clinic via establish modality (email/fax/EMR/portal)

Clinic is given visibility to entire journey at all times

### Benefits

Reduced operational burden on IVF coordinators

Transparency into patient journey

Dedicated Kit Coordination team

Improved patient journey

### Cost

Coordination of blood draw (if required): free of charge

Shipping fees:

Domestic: Free of Charge

International: \$150 each way
